Claim Rejections - 35 USC § 112

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1-6, it is not clear as to what the switch circuit is connecting the required laser diode, from the plurality of laser diodes, to. The claims seem to be missing a section that identity where the laser diode is connected to. Clarification is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,724,793. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the current application are broader than the claims of the patent, which includes the additional limitations of the patent.

The difference between the current application and the patent, is that in the patent, the plurality of laser diodes have additional limitations including different power output levels. Removing this feature from the laser diodes would have been obvious in order to simplify the system. Further since the claims in the current application are directed to a recording or reproduction apparatus for an optical disk, the ability of different output power levels of the lasers diodes are inherent to these type of apparatus and there would be very similar to the claims of the patent, thus would be deemed not patentably distinct from each other.
